

Portable gas detector Polytector III G999

Portable gas detector
Polytector III G999
for personal protection

Polytector III G999

Avantages:

- ✓ Durable design for use in demanding industrial environments
- ✓ Easy configuration
- ✓ Wireless transmission of current data
- ✓ ATEX Certification
- ✓ Capable of motion tracking, position recognition and Dead-man function

Polytector G999 is a hand-held measuring device for personal protection against the dangers of toxic or explosive gases and vapors, as well as against lack or excess of oxygen. The G999 continuously measures in diffusion mode or by sucking in gas with an integrated pump and warns the personnel carrying the equipment in the event of a gas hazard with a visual and acoustic alarm.

The G999 has 5 sensor slots and can simultaneously measure up to 7 different types of gases. The sensor slots can be equipped with up to 11 different catalytic combustion (CC) sensors for CH₄ measurements, 1 infrared (IR) sensor, up to 4 different electrochemical (EC) sensors and 1 photoionization detector (PID).

Important note: The technical parameters of the G999 product can be modified. Contact us for further technical advice and tailor-made solutions.
